BPA Web Appliaton Team

Description of project

The team created a database-driven website with server-side functionality. The team designed and built a working web application. You can view the finished page at https://lit-woodland-34513.herokuapp.com.

We created a site for Epic Win Sporting Goods, LLC which is an up and coming company in the sales of sporting goods equipment, hunting/camping equipment and footwear. We developed a web application in Nodejs, MongoDB as a database, and Heroku.com to host the site.   It is an online store. Users can purchase online products and increase their online presence through the use of social media and web tools.
